

Dependence. Excellence. Values.

DEV SOLAR

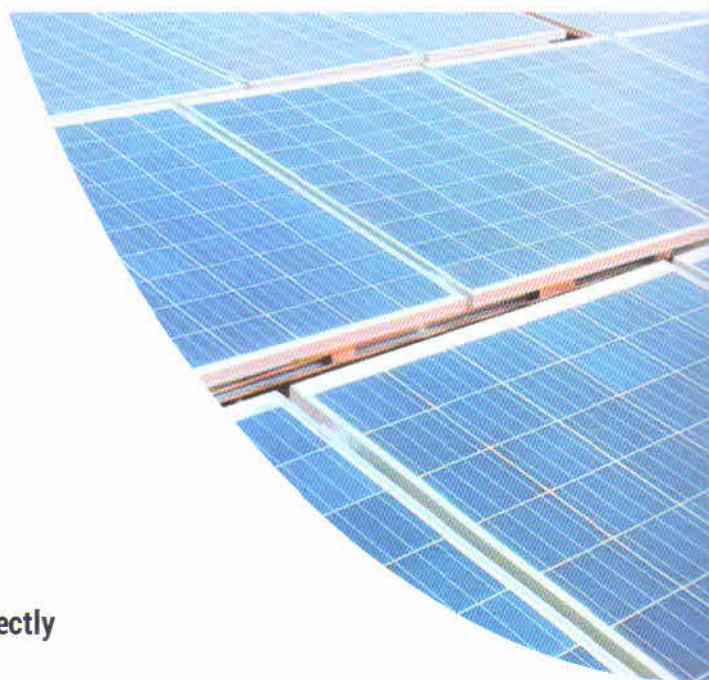

*The Ultimate Power Solution
Provider Through Solar...*

OFF GRID SYSTEM (Solar System with Battery)

- In this system energy harvested from solar will be used directly and also charging the Batteries
- This system is designed with high intelligence program to take care battery charging and regulate the power supply by convert DC power to AC power and also make use of solar power in optimum way
- This system combines three different electrical sources (energy from solar, stored energy in the battery and energy from the grid). This will act as an uninterrupted power supply and maintain the load with any one of the powers from the three sources
- This system will be well utilized for the applications like Domestic, Hospitals, Data centers, Educational Institutions and also in Laboratories.

ON GRID SYSTEM (Solar System without Battery)

- In this system the energy harvested by the solar is directly consumed by the available loads
- There is no system for storing the energy
- The generated power is fed in to the connected loads
- If the generated power is more than the demand then the excess power will be exported to the grid
- If the generated power is not sufficient for the connected loads then the excess power required will be imported from the grid
- With the help of Net meter(bi-directional meter) the imported power and exported power are measured
- Generally the on grid solar system is much beneficial to the bigger Industries, Commercial establishments, Colleges and Schools where the demand is maximum in the day time

SOLAR PUMPING FOR AGRICULTURE

- We can run up to 20HP submersible pump
- There is no limitation in the depth of the bore
- No need battery storage system
- Same delivery as like electricity board Power
- No need to change a pump or any system. Existing pump of any make can runable.
- Solar power will be comfortably produced between morning 8 AM to evening 5 PM in good sun shine day. So the pump can be runable throughout the day time
- One time investment of solar which got a life span of more than 25 years

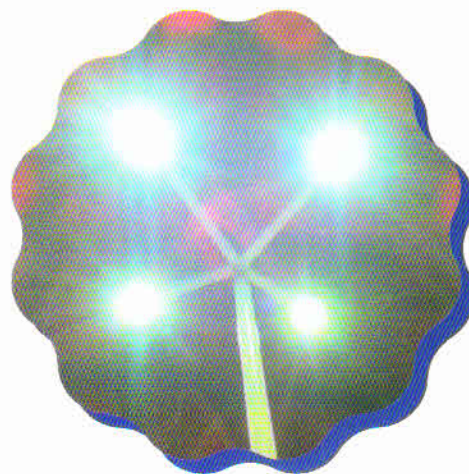

STAND ALONE STREET LIGHTS

- Solar stand alone street lights do not require any connectivity with the grid and there is no man power required to switch ON/OFF regularly
- There is no grid connectivity required. These lights can be erected any where we need
- Because of its independent operation this becomes very useful in Villages located at thick forests, hilly areas and also in remote places where there is no electricity
- Stand alone street lights play a major role in urban areas by replacing the conventional street lights and there by reduces the demand for grid power
- It also useful in lighting path ways of Educational Institutions, Hospitals, place of worship and also in common markets

CENTRALIZED STREET LIGHTS

- In this system power to the street lights are supplied through a centralized Solar power generating system
- The lights used for this system are normal AC lights which are connected with Cables
- No electricity power required
- Timer is provided to ON/OFF the lights automatically
- We can also automatically switch OFF alternate lights in the late night
- Already existing street lights can be connected with this system
- This is well suited for locating street lights under shaded places

SOLAR WATER HEATER

- Pressurized and Non pressurized models available
- Solar heat is used to heat the water
- There is no need of electricity to heat the water
- Economical and beneficial one to the customers comparing with other modes of heating process

DEV INTERNATIONAL

15, Doctor Thottam, Kalapatti - Kurumbapalayam Road,
Coimbatore - 641 048.

Branch: Plot No.45, 1st Floor, Panjaliamman Nagar,
Oulgaret, Puducherry - 605 009.
